Metallgesellschaft case study

Lecture 1: Introduction
1 of 42

FLORIDA STATE UNIVERSITY
The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 gamet.acns.fsu.edu/~jsdorran

The background of MGRM

- Metallgesellschaft AG (or MG) is a large industrial German conglomerate engaged in a wide range of activities ,from mining and engineering to trade and financial services.
- MG have several subsidiaries in its "Energy Group", with MG Refining and Marketing Inc. (MGRM) in charge of refining and marketing petroleum products in the U.S.

What happened

What happened if oil prices fall? (in late 1993)

↓

Cause funding problems for MGRM

↓

Cancel its long-term contracts with its customers

↓

Terminate its hedging program

↓

Cause about \$1.3 billion loss

Lecture 1: Introduction
3 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

MGRM's Marketing Program

- MGRM provided their customers with a method that enabled the customer to shift or eliminate some of their oil price risk.**
 - This option would be attractive to a customer if they were in financial distress or simply no longer needed the oil.
- MGRM believed their financial resources gave them the ability to wholesale and manage risk transference in the most efficient manner.**

Lecture 1: Introduction
4 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Hedging strategy

- MGRM's hedge strategy to manage spot price risk was to use the front-end month futures contracts on the NYMEX.**
- MGRM employed a "Stack-and-roll" hedging strategy.**
 - buying a bundle of short-dated futures contracts to hedge the long term exposure
 - roll over just before expiration

Lecture 1: Introduction
5 of 42

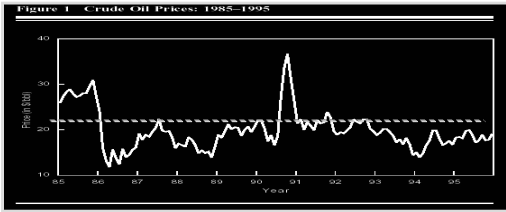

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Why MGRM needed to hedge

■ MGRM's contract price reflected a premium of \$3 to \$5 per barrel

Oil prices ↑: the firm could suffer massive losses

Lecture 1: Introduction
6 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Hedging strategy(con.)

- The futures contracts MGRM used to hedge were the unleaded gasoline and the No. 2 heating oil.
 - According to the NYMEX, MGRM held the futures position equivalent of 55 million barrels of gasoline and heating oil.
- MGRM went long in the futures and entered into OTC energy swap agreements to receive floating and pay fixed energy prices.
 - Their swap positions may have accounted for as much as 110 million barrels to completely hedge their forward contracts. (The swap positions introduced credit risk for MGRM.)

Lecture 1: Introduction

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Stack and Roll Hedge

- Independent oil refinery signs a contract with MGRM
 - 10 year contract, 100,000 barrels of oil a month
 - MGRM hedges the delivery by purchasing 12,000 futures contracts near maturity
 - Each futures contract is for the purchase of 1,000 barrels
 - This equals the commitment to delivery 12 million barrels
 - What happens at the end of the month?

Lecture 1: Introduction
 8 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Stack and Roll Hedge

- A short contract matures
 - MGRM delivers 100,000 barrels of oil
- The long stack expires
 - Reverse the position
 - If prices rise, make money-but must be reinvested to create the new hedge
- Create new hedge, less 100,000 barrels
- Question: Why not hedge over-longer periods, and the contracts that were going to expire?

Lecture 1: Introduction
 9 of 42

FLORIDA STATE UNIVERSITY
The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

How is this profitable?

- **They were the market leaders**
 - Offering unique energy derivative products to their clients
 - Filled a liquidity demand. Offered long-term fixed rate oil contracts
 - By doing so, increased the sale of its derivative products. But were they priced correctly?
- **The hedge neutralize long-term exposures**
 - i.e, there is no long-term contracts, or there is poor liquidity (moves the market, wide bid-ask spreads)

Lecture 1: Introduction
 10 of 42

FLORIDA STATE UNIVERSITY
The COLLEGE of BUSINESS

 garnet.acns.fsu.edu/~jsdorán

From Backwardation to Contango

Forward Price =Spot price + Cost of Carry - Convenience yield

- **If Cost of Carry > Convenience yield**
→ **Contango Market : $F > S$**
- **If Cost of Carry < Convenience yield**
→ **Backwardation Market : $F < S$**

➤ **A stack-and-roll strategy appeared to offer a means of avoiding carrying costs because short-dated futures markets for oil product historically have tended to exhibit backwardation.**

Lecture 1: Introduction
 11 of 42

FLORIDA STATE UNIVERSITY
The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

To Contango

- **This was a result of market forces; like the end of the gulf war**
 - But in part was due to the size of the MGRM's position
 - 15,000 and 30,000 a day, versus 55,000
- **Marked-to-Market**
 - Margin calls approached 90 million
 - This resulted in liquidation
- **Accounting effects**
 - When do you report a loss.
- **Should not have sold the position.**

Lecture 1: Introduction

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Who's to blame ?

- Funding risk
- Operational risk
- Basis risk

Lecture 1: Introduction
 13 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

What went wrong

- Taking bets on the relationship between spot and forward prices
- What of the size of the positions? Could they really be hedged?
- In 1991 the price of oil fell below the spot price (backwardation)
 - The convergence to spot helped generate large profits
 - As did marking-to-market

Lecture 1: Introduction
 14 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdorán

Funding Problems

- Marking-to-market forced firms to recognize future trading losses immediately
- Offsetting gains on forward delivery were deferred
- NYMEX raised margin requirements for MG putting further pressure on cash
- Rumors spread

Lecture 1: Introduction
 15 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdoran

Funding Problems (cons.)

- **Some counterparties terminated their contracts**
- **MG's board fired CEO and orders cancellation of hedging program**
- **NYMEX withdrew hedging exemptions**
- **1.9 billion dollar bailout package**

Lecture 1: Introduction
 16 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdoran

Operational risk

- **Operational risk - inadequate control systems and management failure**
 - Poor execution and maintenance of a sound hedging strategy
- **MG reported DM 1.8 billion loss on operations in addition to 1.3 billion hedging loss**

Lecture 1: Introduction
 17 of 42

FLORIDA STATE UNIVERSITY

The COLLEGE of BUSINESS

Dr. James S. Doran, Department of Finance, Florida State University
 garnet.acns.fsu.edu/~jsdoran

Cash vs. Profits

- **Poor cash strategy versus a solid profit strategy.**
- **This is a liquidity issue**

Lecture 1: Introduction

Defense of MGRM's Hedging Program

Consider losses from MGRM's hedging program to be sunk costs.

Culp & Miller find out the program had a net profit had it been continued by April 1995.

They find that the program had a positive expected net present value at the end of 1993.

The Deutsche Bank was not only a creditor to MG but also one of its largest shareholders, therefore it should have been willing to continue financing MGRM's hedge program.

Lecture 1: Introduction
