## Summary

- P&G entered into two seemingly innocuous SWAPs
- Within four months, had to charge \$157 million to pre-tax earnings.
- This was a minor loss given the net income for P&G was \$2.2 billion
- The issue is whether corporate treasuries should be profit centers, or manage liabilities using structured derivatives
- Landmark court ruling on fiscal responsibility and off-balance sheet disclosure
- BT was revealed as “duplicious weasels”
- P&G appeared to lack risk-management skills

## Why did P&G need the SWAP(s)

- Entered into two swaps in 1993 and 1994
- Wanted to reduce the borrowing to 40 basis points below commercial paper.
- Currently at \$100 million dollar swap that was set to expire
- Entered into a five year floating for fixed swap with BT
- What were P&G' expectations about interest rates?

Common Sense Exercise

- What is the annual saving for a 40 basis point reduction on \$100 million notional principal?
- What was P&G annual expenses in 1994
  - \$500 million
- That is a percentage decrease in annual expense of roughly ???

Why go German

- It is not clear why they entered into a German mark-denominated deal in February 1994
- 200 DM million (\$93 million)

Why not go to the Exchange

- They could have gone to the CBOE
- However accounting treatment was more favorable for OTC products
  - Give me some reasons?

### The First SWAP

- U.S dollar denominated interest swap on 2 November 1993.
- \$200 million notional principal with a five year maturity
- Complicated transaction that contained two parts
  - A plain vanilla swap and a gamble

 garnet.acns.fsu.edu/~jsdorán

### Plain Vanilla Swap

- BT paid P&G a fixed rate of 5.3% on \$200 million
- P&G paid BT a floating annual rate tied to the daily yield on 30-day commercial paper
- Noticed they have doubled down
- What is unusual here?

### The Side-Bet

- Here is where P&G lost big
- BT essential sold a call option
- P&G earned a premium of 75 basis points on the principal
  - \$1.5 million
- P&G paid BT a fixed rate of interest over the next five years- but was determined in a unique fashion
  - Spread between the *yield* of a five T-note and the *price* of a 30 year T-Bond.
  - Rates were set on May 4<sup>th</sup> 1994
- This is why the swap is referred to 5s/30s Swap.

P&G Response

- Hedge the exposure in March 1994
- Reset the premium to 88 basis points
- Spread ended up being 14.12% costing \$28.2 million
- If the bet was successful P&G could have borrowed for cheaper than the U.S government

DM Interest Rate SWAP

- 14 February 1994, entered in 4.75 year interest rate swap
- For the first year BT paid the German swap rate + 233 basis while PG paid the swap rate + 133 basis. What?
- Starting the second year PG premium depended on whether the four year swap rate was below 4.5% or above 6.01% at any point during the previous year. This was known as the *Wedding Band*.
- If the rate crossed the wedding band the premium would equal ten times the difference between four year rate and 4.5%

 garnet.acns.fsu.edu/~jsdorán

What Happened

- In early 1995 the swap rate was 5.35%
- On February 4<sup>th</sup>, 10 days before the 2<sup>nd</sup> year initiated, the U.S tightened monetary policy, resulting in a worldwide increase in rates
- The swap rate went outside the band and the premium increased to 16.4%
- This is a cost of \$60.9 million

Lecture 7: P&G

---

---

---

---

---

---

---

---

### The Net Effect

- P&G sued on February 6<sup>th</sup> 1995
- P&G claimed BT withheld information
- Settled \$35 million
- What of BT- how did they hedge?
- What was the investor perspective?
